Digital transformation is the integration of digital technology into all areas of a business, fundamentally changing the way corporations operate and deliver value to its customers; the incorporation of computer-based technologies into an organization's products, processes and strategies. Digitalization helps the organisations to improve competitiveness, while contributing to a greener and more environmentally sustainable world. Organizations undertake digital transformation to better engage and serve their workforce and customers, and thus, improve their ability to compete. Operational excellence on the other hand is a business philosophy that focuses on continuous improvement and optimisation of processes, systems and resources to achieve superior performance and efficiency. It involves streamlining operations, reducing waste, maximising productivity and delivering high quality products or

services consistently.

The combined digital transformation and operational excellence can create powerful combined effect.
